

The Carbon Chronicle

VOLUME 35: No. 10

Authorized as Second Class Mail, Post Office Department, Ottawa
ACME, ALBERTA, THURSDAY APRIL 12th, 1956

\$1.50 a Year; 5c a Copy

One of our senior citizens, Jake Ziegler celebrated his 75th birthday on Wednesday the 11th.

J. F. Ohlhauser returned on Tuesday from hospital where he has been undergoing treatment for his eye.

Mr. and Mrs. Doug Elliott and Mr. and Mrs. Jim Hunt of Calgary were weekend visitors at Carbon.

Hospital patients in the Drumheller hospital this week were Mrs. Van Loon, Mrs. Sybil Poxon, Duncan Code, Mrs. C. C. Perman, Ross Thorburn.

Mrs. V. Higginbotham and children of Elnora are visitors at the home of her parents, Mr. and Mrs. Fred Schmierer.

FOR SALE—RODNEY OATS. Germination 99%. Certification No. X74-1493. 90c bushel —Phone 616, F. J. Ohlhauser, Carbon.

Don't forget the Legion Aux. Dance April 20th.

Mrs. E. Tricker spent a couple of days at Calgary last week.

Barbara Nash and Lorraine Holmes returned home Sunday after spending Easter holidays in Calgary.

Enith Diede spent a couple of days at her home this week. Enith is on the telephone staff in Calgary.

CARBON BAPTIST CHURCH

A Sacred Concert will be presented in the Carbon Baptist Church on Sunday, April 22nd at 11 a.m. by the Chorists of the Christian Training Institute, Edmonton, Alberta under the direction of Rev. E. B. Link.

Mr. and Mrs. James Graham and children of Vancouver arrived Monday at the home of his parents, Mr. and Mrs. C. Graham. James Graham has been transferred from Sea Island to the R.C.A.F. Station at Calgary.

Mrs. E. Sherring was a weekend visitor at the home of her son, Frank Sherring.

Mr. and Mrs. Dick Poole and family spent the weekend at East Coulee at the home of Mr. and Mrs. James Nadasdi.

Mrs. Margaret Fox was elected delegate to the I.O.D.E. Annual Convention being held this week in Edmonton.

We regret to learn of the sudden passing on Tuesday of one of Carbon's former settlers Jack Hay, 70, who at the time of his death resided at Sundre.

He leaves to mourn his loss, his wife, Alice; four daughters, Muriel, Irma, Stella, Margaret; a son, all of Sundre; two sisters in Ontario; one brother, Walter of Carbon.

Funeral services were held in Olds Friday afternoon.

Level Land

Mr. and Mrs. Emil Gramms, Lorne Gramms and Wayne Leiske returned on Thursday night from a week's holiday in Portland, Oregon. They visited on

their way back with the Bettins at Creston, B.C. and Frank Schmaltz at Sparwood, B.C.

Howard Gimbel who is attending Walla Walla College, Wash came Thurs. night and paid a short visit to his parents, Mr. and Mrs. Jacob Gimbel. He took his car back with him. Howard is accepted at Loma Linda for this fall and will enter his 5th year in the pre-med. course.

Mr. and Mrs. Albert Triebwasser of Tees are now living in the Level Land district and are employed at Emil Gramms.

Mr. and Mrs. Bill Oliver have just returned from a trip to the U.S.A. and are staying with their parents, Mr. and Mrs. Jake Gimbel.

CARD OF THANKS

Many thanks to the Community for the farewell party and gift that was presented to us.

The Art Biebrick Family.
Many thanks to the Carbon Baptist Church for the farewell and gift that was presented to us.

UNWANTED HAIR

Vanished away with Saca-Pelo. Saca-Pelo is not like ordinary depilatories that remove hair from the surface of the skin but penetrates through the pores and retards the growth of the hair. Lor-Beer Lab. Ltd. Ste. 5, 679 Granville St., Vancouver, B.C.

SEEDS — GRASS — GRAIN

Once more we are pleased to serve you with your requirements for grass seeds, but it would be advisable to get your supply early as there is a very limited supply of some varieties. Prices are as follows, F.O.B. Linden:

Brome, No. 1.....\$23.00 cwt.
Alfalfa Ladak, No. 1 \$37.00 cwt.
No. 2.....\$34.00 cwt.
Alfalfa Grimm No. 2 \$29.00 cwt.
Sweet Clover white No. 1 \$16.00
No. 2.....\$14.00 cwt.
Sweet Clover yellow No. 1 15.00
No. 2.....\$14.00 cwt.
Alsike No. 1.....\$25.50 cwt.

Fescue,
Creeping Red No. 1 \$24.50 cwt.
Crested
Wheat Grass No. 1 \$35.00 cwt.
Other prices available upon request.

The grain offered to us for hoists, machinery and appliance deals enables us to supply you with most of your requirements for seed grain or feed.

GARDEN NOTES

Bigger lots give gardener greater scope for displays

Most of the new house-building has been on much bigger lots, giving the gardener an opportunity to have real displays of some of the gorgeous, showy flowers that the plant breeders have brought to perfection in recent years. For such situations, very large beds, solidly planted with petunias, zinnias, spider plants, cosmos or dozens of other annuals, are most suitable. Virtually all of these things are easily grown either from seed directly sown outdoors or transplanted from beds specially prepared and sown just as soon as the weather has turned warm and there is little danger of any more frost.

New program for square dancers

A new Saskatchewan produced radio program "Square Dance Note Book" will be aired over most Saskatchewan radio stations commencing 21 and 22 of March.

Square Dance Note Book features the latest recordings — as they are released — of six major recording companies — Hoedown, MacGregor, Old Timer, Sets-In-Order, Western Jubilee, Windsor — interspersed with up-to-the-minute information and notes from the Square Dancing world, such as: where and when Saskatchewan Square Dance Clubs meet, location and date of Square Dance festivals in the province, itinerary of visiting callers, location and date of Square Dance Camps in Canada and the United States.

Noreen Wilson, long time Square Dance enthusiast who has helped in the formation of numerous square dance clubs, and has assisted in instructing various groups will M.C. the program. Noreen has recently returned from Sets-In-Order Institute at Asilomar, California, where she gained valuable insight into the latest square dancing trends which she will pass on to her listening audience.

The tremendous growth and interest in Square Dancing in Canada and the United States, with a corresponding popularity in Saskatchewan, plus the cultural aspect in this form of recreation, in which young and old alike participate — has prompted Saskatchewan Power Corporation to sponsor this new, interesting, informative, and entertaining half-hour program.

Saskatchewan Power Corporation invites and would appreciate Square Dance Clubs to forward information on the location and dates of any events they are planning, so that they may be aired. Also, the Saskatchewan Power Corporation will endeavour to give square dancing information to all enthusiasts, whether they be experienced, or just beginning.

Port gets its name from Oporto, Portugal. 3187

Summer cottages, too, can have these large massed beds of flowers simply by planting a few packets of seeds in shallow flats and later taking the same to the cottage and transplanting them into permanent quarters.

There is nothing more striking in the larger gardens, or along the driveway leading to cottage or home than these big beds of flowers either in solid colors of one variety, or of mixtures of various flowers of approximately the same height. In these larger beds we space fairly well to permit easy and early cultivation and we do not try to rush the season.

What we are aiming at is a big splash of color and a garden, which after the first few cultivations will practically look after itself. Solid beds of zinnias, marigolds, petunias, nasturtiums, are particularly effective and we can use either single varieties or mixtures of about the same mature height. This massed planting of flowers, is also a good idea to use in between newly planted shrubbery which will not require full room for a year or two.

Spread them out

There is no reason at all why the vegetable garden should not be producing abundantly from early June right through until hard frost in the fall. The main thing is to spread out the planting. Instead of sowing the whole packet of carrots or beets or beans at one time, we put in a third of the supply a little earlier than usual, another third about the regular time and then save a third for from two to three weeks later than normal.

To further spread the harvest, experienced gardeners will often use early, medium and late varieties of the same vegetable, so that there is always something just reaching the peak of tender quality. One of the greatest mistakes any home gardener can make is to sow the whole vegetable plot on the first fine afternoon. If he does he will have more than he can eat for a few weeks then a regular famine.

Short cuts

The experienced gardener uses all sorts of tricks for getting ahead of his neighbors. He doesn't, of course, risk all his seed or plants this way, but just a few for extra early results. For example in the vegetable garden he may make a few small hills, a foot or so in diameter of very rich soil. In these he will plant a few melon or cucumber seeds, a few early type tomatoes and other things. The rich, open soil will attract lots of sun and to increase the heat and protect from late frosts one may cover with panes of glass, or special waxed paper or plastic covers which act as miniature greenhouses. To further speed growth along, one waters well and adds a bit of quick acting fertilizer.

Another short cut is possible by using plants that have been well started in a greenhouse or hot bed or even in flats in some sunny window. This is a regular practice, of course, with many things like petunias, asters, tomatoes and cabbage. But one can also extend it to almost anything in the vegetable line for extra early production. Some people plant a few melon seeds in an egg shell filled with fine soil or a berry box, then when the weather turns warm plant the whole thing outside.

SO-O-O PRETTY

Scooped-neck pinafore or party dress

by Alice Brooks

Cool scooped-neck pinafore becomes a party-pretty dress — by adding the separate collar! She'll love this versatile new style, you will too — it's sew-very-easy!

Pattern 7186: Children's Sizes 2, 4, 6, 8 included. Pattern, embroidery transfer, directions.

To obtain this pattern send twenty-five cents in coins (stamps cannot be accepted) to:

Household Arts Department, Department P.P.L., 60 Front Street W., Toronto

Order our ALICE BROOKS Needlecraft Catalogue. Enjoy pages and pages of exciting new designs — knitting, crochet, embroidery, iron-ons, toys and novelties! Send 25 cents for your copy of this wonderful book now. You'll want to order every design in it!

Co-operation in Canada

According to the 23rd annual summary of Co-operation in Canada the co-operative movement in this country has experienced a continuous and rapid growth since 1933, though the pace since 1950 has not been so rapid. The summary, covering the crop year ended July 31, 1954, is prepared by the Economics Division of the Canada Department of Agriculture and will be ready for distribution shortly.

Total business reported for 1954 by 2,590 co-operatives with a membership of 1,266,022 amounted to \$1,015.1 million. Co-operatives included farmers' and fishermen's marketing, purchasing and servicing organizations. The co-operatives had assets of \$462.9 million and members equity was \$199.5 million or 43 percent of total assets.

In addition 11 co-operative wholesalers across Canada reported a business of \$175,526,346 including value of farm products marketed, sales of supplies and revenue for services rendered.

The business of fire, life, hail and casualty insurance co-operatives was also substantial.

It is pointed out in the summary that annual figures of co-operative sales of farm products fluctuate from year to year largely because of variations in the value of the western wheat crop. For the crop year 1954 sales declined from \$874.7 million in the preceding year to \$733.0 million or by 16 percent. But total marketings of all agricultural products declined in 1954 and the co-operatives' share of such marketings remained relatively high at 30 percent compared with 32.3 percent in 1953.

Retail value of goods purchased by farm co-operatives for sale to members and patrons was reported at \$234.6 million for 1954, down \$10.8 million from the preceding year. The volume of this purchasing business continued to increase until 1953, but increasing prices accounted for a substantial portion of the increase from 1949 to 1953, just as decreasing prices have been a factor in the \$10.8 million decrease between 1953 and 1954. The value of services rendered by service co-operatives, in fields other than insurance, amounted to \$11.1 million, an increase of \$2.2 million from the year ended July, 1953.

Fishermen's co-operatives reported sales of fish at \$14.9 million and of fishing supplies at \$2.8 million.

Although the number of associations reporting declined in 1954, consolidation of smaller associations probably accounted for most of the decline. This is indicated by the very small change in total membership.

The Pattern Shop

Fashions

Young ensemble

by Anne Adams

She'll love the scooped-neck dress with its "grownup" Empire styling; add the little bolero to complete the smart ensemble! Perfect fashions for a gay plaid cotton, crisp pique, or a fine linen for her "Sunday" outfit!

Pattern 4649: Girls' Sizes 6, 8, 10, 12, 14. Size 10 dress and bolero take 3 3/4 yards 35-inch fabric; 1/2 yard contrast.

This pattern easy to use, simple to sew, is tested for fit. Has complete illustrated instructions.

Send thirty-five cents (35c) in coins (stamps cannot be accepted) for this pattern. Write plainly size, Name, Address and Style number and send orders to:

Anne Adams Pattern Dept., Department P.P.L., 60 Front Street W., Toronto

MAKE THESE

Trellises and flower boxes; sign for lawn

Trellises may be used in various ways to add charm to the house exterior. The above sketch is an example. Across the end of a porch to give privacy or to soften the corner of a garage, a door or window are other uses. The pattern shows views of four styles of trellises.

files and three designs for flower boxes. As tracing patterns are required only for the shaped parts space has been found on the pattern for directions to make the door-side seats and an interesting garden gate that is easy to make. The pattern is rich in detail for the "do-it-yourself" builder. Price of pattern 314 is 35c.

This pattern is taped on the wood and the saw lines for cutting out the blank figures are traced. To get the alert expressions which make this group so attractive the exact shape and position of each spot of color is also traced. This method is to make sure of a realistic effect in the finished project. This will appeal to anyone who likes to work with color and watch the plain wood come to life as each color is added. When making these figures in quantity a silk-screen printing frame saves time in decorating. Pattern 400 shows how to make frame and directions for use. Numbers 308 and 400 are 35c each. Both are included in the Lawn and Garden Figures Packet at \$1.50 postpaid.

Address order to: Home Workshop Pattern Service, Department P.P.L., 4433 West Fifth Avenue, Vancouver, B.C.

Strictly Fresh

We're looking forward to the picnic season. It makes us appreciate the long winter months when you can eat indoors.

If the Easter bunny leaves chocolate eggs in the easy chair

Sow bargain basement grass seed in April and reap wild oats all summer.

An all-day sucker is a fellow who believes every commercial he hears on the radio.

BOZO

By Foxo Reardon

Early grazing on the range

OTTAWA.—Original vegetation on fields at the Range Experiment Substation, Canada Department of Agriculture, Staveland, Alberta, has decreased considerably due to heavy early spring grazing.

Palatable native forage species, particularly grasses, are weakened by over-grazing and are replaced by undesirable weedy types. These changes mean lower weaning weights of calves and poor condition of cows.

Like humans, plants require food, but unlike humans, they are able to manufacture food through the action of sunlight on the green leaves. In grasses most of this manufactured food is used in growth and any surplus is stored in the roots. At certain seasons, especially during early spring, more food is used up than is being manufactured because of the small amount of green leafage available at the time.

Food reserves tend to remain low until about heading stage and then are rapidly built up for the remainder of the season. Heavy spring grazing forces the plants to use large amounts of stored food. This cropping also sets the grass plants back thus delaying maturity, which means they do not begin storing food until late in the season.

If this practice is continued plants may be killed out completely in the spring at the Range Substation. Rough fescue, Idaho fescue, and Parry's oatgrass have decreased in abundance. Wheat grasses which spread by creeping roots have increased.

Annual average weaning weights of calves for a three year period, on the heavily spring-grazed field was 338 pounds. On the moderately grazed field the average weaning weight was 414 pounds. The average annual gain in weight of cows for the same period was 110 pounds on the heavily spring-grazed field and 186 pounds on the moderately grazed field.

'Shorty' doesn't mind ribbing

Edward ("Shorty") Erber, 62, of Charlevoix, Michigan, believes he may be the shortest dogcatcher in the country.

Erber is only four feet, nine inches tall and was known as the shortest man in the American Expeditionary Forces during World War I. He was named Charlevoix County's humane officer recently when the department was organized.

"People still like to kid me," Erber said. "When I call at a house to pick up a stray dog, they ask me such things as:

"Are you going to ride it back? Where's your saddle? What do you do when you run into a dog bigger than you are."

"I've found only one dog in the six months I've had this job that was bigger than me," Erber said. "I guess he was part St. Bernard and part horse. He could have scalped me without stooping."

Erber said he doesn't mind the ribbing.

"My lack of height is what gave me a bit of fame," he said. "I didn't get any medals during the war. Everyone overlooked the fighting I did, but they sure kidded me enough about my height."

FURTHER BONUSES

Toronto Maple Leafs' leading goal-getter, Center Tod Sloan, has received bonuses from the Toronto management for reaching 20 goals, 25 and 30. When Sloan scored Goal No. 30 he wondered if his bonuses would come to a halt as his contract called for three—at 20, 25 and 30. However, Hap Day, Leafs' general manager, announced recently that Toronto would continue to reward Sloan for his prolific sniping. He will receive another bonus when he reaches Goal No. 35 and again when he cracks Gaye Stewart's all-time Maple Leaf high of 37. Stewart scored 27 goals for the Leafs during the 1945-46 season. 3187

A LOT OF WATER

The area of the Pacific ocean is about the same as the combined areas of the Atlantic, Indian and Arctic oceans.

EARLY DISCOVERY

The elements carbon, copper, gold, iron, lead, mercury, silver, sulphur, tin and zinc were discovered before the birth of Christ.

HMM . . . INTERESTING

The British House of Commons has 640 members, compared with 435 members in the U.S. house of representatives.

CLIPPED BIRD

The New Zealand kiwi, a flightless bird, has the shortest wing spread of any bird in proportion to body size.

Broom \$16 million Canadian industry

Probably the most familiar of all household objects, the lowly broom has a long history dating back to primitive man. Missionaries and traders from earliest times discovered natives sweeping their huts with twigs tied to a stock by a piece of bark. From this early beginning the making of brooms has evolved into a manufacturing process that today, in Canada, involves the skills of thou-

sands of workers in factories, forest and farm. Despite the popularity of the modern vacuum cleaner, the production of brooms is a \$16.5 million industry, with 92 Canadian factories engaged in turning out everything from children's miniature sweepers to the specialized curling broom.

National Film Board Photos by Jean Gainfort Merrill

Broom corn is graded according to quality and length of fibre by a workman in a Norwich, Ontario, broom factory. Choicest quality is made into house brooms; heavier, coarser fibres find their way into warehouse brooms. This factory, largest in the British Empire, makes every type, from children's miniatures to curling brooms.

Broom fibres are fed into machine which wire-winds them onto broom handle. Five different lengths of broom corn fibres are required; outer edges take longer fibres, with shorter lengths fed next to handle. Final touch is added by a workman who folds in a strip of velveteen or coloured metal to cover stub ends.

World Happenings In Pictures

RINGSIDE SEAT—THE HARD WAY—A few more inches and Pete Hurley would have joined the spectators. This Welsh rare bit was served up at Cardiff, Wales after Rufus Prince belted his foe.

NOTHING NEW—Harried road commissioners of today can gain rock-bottom comfort from this picture. Some togaed official of Caesar Augustus was in all probability reviled for this rutted paving. Deep-worn by chariot wheels, it was uncovered at the Porta Maggiore in Rome.

ON PURPOSE—She did it herself and scared herself silly. Model made this crayfish with aid of a new do-it-yourself kit for fishermen. Some 21 varieties of lures and a total of 200 fishy tidbits can be fashioned from material in each kit. Synthetic goodies for underwater denizens were first displayed at a New York City sports show.

IN HOLIDAY MOOD — The Queen, accompanied by Princess Alexandra of Kent, prepares to board a plane at London airport for a flight to Corsica. Snow and cold greeted the Queen as she arrived aboard the Royal yacht Britannia, and joined the Duke of Edinburgh for a 10-day vacation.

MOMENT IN TIME — Momentous fly-past by British Gloster Meteor F.R.-9 jets fails to disturb the monumental calm of Egypt's ages-old pyramids. Jet's fleeting shadow across the timeless desert marks the departure of Britain's last operational jet squadron to leave Egypt under terms of the Anglo-Egyptian Suez Canal Zone Bases Agreement. Squadron is now based at Malta.

VALHALLA—Retirement is literally "the berries" for this venerable cable car, veteran of service on San Francisco's world famous cable-car system. Together with several of its sisters, the car will rattle and clang along a route serving Knott's Berry Farm, where mementoes of the traditional west compete with berry products for attention at Buena Park, Calif.

LEATHER WITH FABRIC is used by Hermes of Paris for this spectator-sports frock of fine, off-white wool jersey. An applied V of dark brown suede is met at the waist with matching laced belt.

CUCKOO

The chirping of cuckoos interrupted proceedings at the London airport customs department. They came from three parcels brought in from Germany by a passenger. Each contained a cuckoo clock.

MODEL'S MODEL—That's the phrase which describes Pat Patterson. She is one of several models who fashioned grown-up versions of doll clothing at the opening of the annual Toy Fair in New York City. Dolly and her model are both wearing old-fashioned gowns of pale pink chiffon.

NOW AIN'T THAT JUST DUCKY? Our plush drake quips as his girlfriend gets her bonnet straightened by a young miss. The fine feathered friends were just in time for the Easter season. Both are of rayon plush with soft plastic faces, however, in this case it's the male who does the talking. He's rigged up with a Swiss music box which can be wound to play a gay seasonal tune.

The Sports Clinic

(An official department of the Canadian Amateur Sport and Physical Fitness Development Service)
By Lloyd Percival

Don't waste the off-season

Most hockey and basketball players are getting ready to pack up their gear for another season. How many of them realize just how much they can improve their skills by taking part in the right kinds of activities during the summer and fall?

Proper off-season sports can help develop the same muscles and types of co-ordination and movement that you use in hockey and basketball. They'll also be a conditioner that can help you go through next season with greater power and stamina. You will be able to get into condition quicker and you'll tire less easily during the season.

The best off-season activity for the budding basketball or hockey star is track and field—especially the short sprints and the broad jump. These events develop that all-important leg drive. Such events as the half mile and mile help improve general condition and stamina, and train you to force yourself to greater effort—a habit every athlete should have.

Other good games to play are tennis, soccer and lacrosse. These all increase your co-ordination and balance.

Goalkeepers in hockey should play things like table tennis, badminton or handball which demand quick action of hand and foot and will train your eyes and improve your powers of close concentration.

The mark of champions

Knute Rockne, the famous Notre Dame coach, used to say that the most important words in the English language were: "Start! Stick! Finish!" Rockne knew what made

WEEKLY BIBLE COMMENT

HOME IS TRUE SCHOOL OF CHRISTIANITY

The home is even more important than the church or school in the exemplification and teaching of Christianity.

Nearly all recognize this fact, yet the home situation in the land constitutes one of the greatest perils and problems of our time.

It is appalling to think of the number of children who grow to adulthood with no real home life at all. It is tragic to contemplate broken homes caused by divorce or separation. It is a cause for heartache to consider the barrenness of an environment in which love is missing.

Perhaps most appalling of all is the realization that there are numerous homes in which parents are neither divorced nor separated, but where they might as well be so far as healthy and happy home life is concerned. What a heritage for a child who grows up in the midst of such home antagonism and strife!

In contrast, let us consider the blessedness of the truly Christian home. Daily prayer, Godly living, example and a spirit of kindness and fairness toward all makes up the soil in which true happiness thrives.

Truly, our salvation and the salvation of all that is good in life must spring from a basic, Christian home. Let us pray that all society may some day enjoy the manifold blessings of such a way of life.

FIRST MANICURES

A baby's finger and toenails grow quickly and, although they are very soft, the child may scratch himself, unless the nails are kept short. The fingernails should be cut and carefully rounded; the toenails should be cut straight across. They should be kept perfectly clean, which will be easier if they are not allowed to grow long.

3187

a champion athlete, and this was his way of getting across the point that champions have to have perseverance.

Developing perseverance is a tough job. But it is something you can accomplish if you work at it day by day. However, you can't expect to have perseverance in just your athletic activities—you must have it in your general life too—in everything you do.

Bob Mathias, who won the Olympic decathlon title in 1948 at the age of 17 and set a new world record in the 1952 Olympics, used to have a motto on the wall of his bedroom: "Quitters never win, and winners never quit." This motto helped get him through sports' toughest event in the face of tremendous obstacles. Make it your motto too.

Sports College has announced a \$700,000 service for the development of amateur sports and physical fitness levels in Canada. This newspaper is pleased to participate in this plan by presenting "The Sports Clinic" to its readers in the best interests of this community. Further information on how you can benefit from this service may be obtained by writing to Sports College, Box 99, Toronto 1, Ontario.

The United States produces more than 40 percent of the world's shoes.

THE LONELY RACE — Alone save for a few newsmen and police, Wes Santee is shown as he warmed up for a meet at Madison Square Garden while his suspension by the AAU ran the gamut of the courts. Even if America's greatest miler is declared to be a Simon-pure amateur, Amateur Athletic Union's lifetime ban on him for allegedly accepting excessive expense money may stick with the International Olympic Committee. Such action would bar him from participation in the Olympic Summer Games at Melbourne, Australia.

RAW VEGETABLE SNACK

Children usually like to sample a scrap of any vegetable that is being prepared for the table. These raw vegetables are good for anyone, since they contain vitamins and minerals that may be lessened by the cooking process if they are boiled too long or in too much water. Turnips, cabbage, carrot or other raw vegetables are tasty and nourishing.

Ticklers

THE TILLERS

—By Les Carroll

Too risky

Grocer John Dooley, like most of Crossville, Tennessee's, male population, is growing whiskers for the town's centennial celebration. He ordered a moustache cup from Knoxville, but there was only one to be found in the entire city.

On learning this, Dooley wired: "Please do not ship moustache cup. Too risky. Will call in person."

He did, too, making the 150 mile round trip so he can strain his coffee.

ANSWERS TO QUICK QUIZ

5. The pipe line enters the U.S. at Gretna, Man., southwest of Winnipeg, travels south of Lake Superior and re-enters Canada at Sarnia, Ont. 3, 110,000, a drop of 43 percent from the post-war record year, 1951. 1. The eel; eels from eastern Canada spawn near the West Indies. 4. Finance department, now nearly a billion dollars a year, mostly for interest on public debt. 2. It comes from an Indian word that means, "The place where the white man mended his cart with the jaw of the moose." (Material prepared by the editors of Quick Canadian Facts, the pocket annual of facts about Canada.)

Quick Canadian Quiz

1. Name the only fresh-water fish which goes to sea to spawn.
2. What is the origin of the name of the city of Moose Jaw, Saskatchewan?
3. How many immigrants were admitted to Canada in 1955?
4. Excluding defense costs, which department of the federal government is the biggest spender?
5. At what points does the Alberta-Ontario crude oil pipe line cross the Canada, U.S. border? (Answers in another column)

BEWARE OF SPRING THAWS

The first warm days of early spring make ice on lakes, rivers or other bodies of water very treacherous and unsafe. Every year, reports of drownings of small children who wander out on the fascinating water's edge, appear in the press. In addition to cautioning children against playing on the ice in quarries, excavations or trenches, steps should be taken to prevent young children getting into dangerous places by erection of fences or other obstructions.

Here's the Answer

Recent student riot in Alabama stresses South's resistance to racial integration

HENRY LESESNE
Correspondent for CPC)

ATLANTA, Ga.— The riots and demonstrations by students and townspeople which led to the exclusion—temporarily, at least—of the first Negro co-ed at the University of Alabama, has posed the question:

Just how far has the process of racial integration proceeded in the state universities and denominational or private colleges in the southern and "border" states since the first U.S. Supreme Court decision affecting segregation on the campus was rendered over a decade ago?

The answer is that all states now except four—Mississippi, Georgia, Florida and South Carolina—admit Negroes to white state universities at least on the graduate level. Pending or threatened federal court litigation is expected to force the issue in these states sooner or later.

A great many of the denominational colleges have dropped the color bar in the last few years, although not in such states as Mississippi or South Carolina, which have the highest ratios of Negro population among the southern states.

A recent study by Dr. Guy B. Johnson, professor of sociology at the University of North Carolina, revealed that well over 100 institutions of higher learning in the south and border states now admit Negroes, compared with only three of four, something over a decade ago.

Dr. Johnson calls this a "quiet revolution." It has not attracted a great deal of attention. The 100 or more colleges include both state-supported and private colleges.

Generally, according to this study, the attitude of the white student has been one of indifference or sympathy towards the newly arrived Negro student. There has, however, been no particularly large matriculation of Negro students at any one college.

Autherine Lucy, 26-year-old Negro secretary of Birmingham, attended only a few classes at the University of Alabama in Tuscaloosa before shouting, egg-throwing mobs caused university authorities to exclude her from further classes as a "safety measure."

The university authorities, as well as Miss Lucy, blamed "outsiders" for agitating or fomenting the demonstrations, although a considerable number of students, it was conceded, were involved.

Some states in the south, such as Texas and Tennessee, and others, are in a process of "gradual" racial desegregation at all state-supported institutions of higher education.

Target in "Incidence"

Federal grants awarded four prairie hospitals

OTTAWA.—Four prairie province hospitals have been awarded federal health grants totalling more than \$169,500 to assist in their current expansion programmes, Hon. Paul Martin, federal health minister announced here.

King Edward Hospital, Winnipeg, gets a grant of \$33,000 to help meet costs of altering a section of the hospital to provide accommodation and related facilities for 22 more chronically ill patients. King Edward Hospital provides services for upwards of 400,000 people in the Winnipeg district and in rural areas of Manitoba.

In Saskatchewan a grant of \$48,000 goes to St. Joseph's General Hospital, Estevan, towards construction of a new addition with accommodation for 35 patients, and 16 bassinets in cubicles. A community health centre is included in the new addition with laboratory, physiotherapy and x-ray facilities and an emergency room. Scheduled for completion this spring, the addition replaces a 35-bed annex outside of Estevan which has been condemned for hospital purposes.

In Northern Saskatchewan, the Uranium City Union Hospital gets a grant of \$40,583 towards construction costs of a new hospital and staff residence. The new structure has accommodation for 27 patients, 14 bassinets in cubicles, outpatient and laboratory facilities, and a 23-bed nurses' residence. The new hospital replaces the Uranium City Hospital which was destroyed by fire in May, 1955.

In Alberta a grant of \$48,000 has been awarded to the Claresholm Chronic Hospital. Scheduled for completion in November of this year, the new building project will provide accommodation for 32 chronically ill patients. Related facilities will include a solarium lounge area and therapy and treatment rooms. Costs of construction not covered by the federal and provincial grants are being met by the municipality of Willow Creek.

However, states such as Mississippi, South Carolina and Georgia have so far succeeded in resisting any sort of racial comingling at schools, even on the graduate level, and their legislatures have adopted standby legislation that will permit them to close all public schools, if necessary, to resist integration.

Alabama was in this same category until federal courts ordered the University of Alabama to admit Miss Lucy, an under-graduate. Meanwhile, the suit of a Negro to enter the University of Georgia law school has been pending for several years.

Various factors or circumstances, together with a regulation requiring an entrant's application to bear the signatures of five former students, have served apparently to prevent, so far, the filing of such a suit in Mississippi.

South Carolina was one of the first states to be faced with legal action to obtain admittance of a law student to the University of South Carolina.

The state hastily created a law school for Negroes at Orangeburg and such a course was upheld in a district court decision by Federal Judge J. Waties Waring, now retired, who took occasion, however, to comment on the state's "extravagance" in such an expedient.

The Waring decision antedated by several years the United States Supreme Court decision in the Texas and Oklahoma cases which held that because of certain "intangible" factors involved, separate law school facilities could not, in fact, be equal.

Thurgood Marshall, general counsel of the National Association for the Advancement of Colored People, told a state NAACP meeting in South Carolina recently that the organization's next objective in the state was to obtain the admittance of Negroes to the University of South Carolina.

The case of a Negro seeking to enter the law school of the University of Florida has been pending in the courts for six years, and the Florida supreme court recently ruled against admittance until determination is made as to whether such action would have "harmful effects," and the case is now before the United States Supreme Court for review.

Florida, however, has generally been classified as among the "middle of the road" southern states on the issue of school integration, as contrasted with the "no-compromise" states such as Mississippi, Georgia and South Carolina.

North Carolina has admitted Negro law students to the University of North Carolina since 1951 and recently, on order of a United States district court, enrolled several Negro undergraduates. Subsequently, however, the state decided to appeal the district court decision to the United States Supreme Court.

HOLLER GUY!—Bill Rigney, manager of the New York Giants, shows some elegant dental work as he booms instructions to his charges during spring training at Phoenix, Ariz.

Water development

The water development Branch of P.F.R.A. is concerned with assisting individual farmers and communities within the P.F.R.A. area to establish water storage works on a self-help basis. Water thus provided may be used for a variety of purposes such as irrigation, stockwatering, domestic use, town supply and recreation. Work carried out by the branch is divided into three categories comprising individual and neighbor farm projects, community projects and irrigation and storage projects.

In the case of individual and neighbor farm projects technical and/or financial assistance is made available but the responsibility for actual construction remains with the individuals concerned. Community projects may be built and financed entirely by the Branch or in conjunction with the community, depending on circumstances. Classified as irrigation and water storage are those projects which are too big to be handled, even in part, by local bodies and yet too small to come under the classification of major irrigation and reclamation works. The capital works for such projects are usually financed by P.F.R.A. and the distribution works by the Provincial Governments or other local bodies.

Individual farm projects refer to those benefiting one farm only, while a neighbor project represents two or more farmers building a somewhat larger project for their common use. These projects are designed to catch and store run-off water from melting snow. The type of construction is commonly a dugout, a small dam or a diking system.

In cases where farmers form a Water User's Association with the intention of storing and utilizing water on a community basis the P.F.R.A. will co-operate with the group. Rural municipalities having the same objectives as the Water User's Association are also included under this scheme. Provided that the proposed project is feasible from all aspects, the Government of Canada may assume the cost of the capital works involved. On irrigation projects this does not include the cost of the distribution system for irrigating. The province concerned or the Water User's Association usually undertakes this work.

Typical of the community projects constructed under this policy, and giving excellent service in their second and third year of operation, are those located in Alberta along the northern slope of the Cypress Hills near the Alberta-Saskatchewan border. The Ambrose Flats, McAlpine and MacKay Creek projects are now in full operation.

Taking advantage of natural depressions to store over 150 acre-feet of water during flood season the Ambrose Flats project is capable of releasing water down Ross Creek in drought times for the benefit of 12 water users along a 12-mile reach towards Irvine, Alberta. Similar in type but somewhat larger in scale, the 650 acre-foot McAlpine project serves 14 farmers along the creek channel towards Walsh. The MacKay Creek project with its storage of 600 acre-feet has been of special value in meeting the water supply needs of the Graburn district. Residents of this area have in many years, been forced to haul their water. The new project means an assured supply for some 20 farmers along 15 miles of creek course.

During 1954 a total of about \$428,000 was spent on eight irrigation and water storage projects of which five were completed. These projects among many others, are doing their part collectively to achieve a greater measure of rehabilitation and economic security for prairie farmers.

On The Side : • By • E. V. Durling

What article do women lose most? Answer is, umbrellas. Records of "lost and found" departments reveal women lose 10 times as many umbrellas as men. Women try to think of too many things at the same time. That's why they are always forgetting some of their possessions. Females should have their umbrellas attached to a belt. There is on the market a combination belt and umbrella holder. The umbrella fits into a scabbard like a sword.

How pancakes got glamour

Crepes suzette were originated by Prosper Montagne, then chef at the Cafe de Paris, Monte Carlo. They were first concocted for King Edward VII of England.

Almost confidential

Brahms claimed everybody resembles a musical instrument in some way. Have been unable to completely confirm this claim. However, I did see a woman who was shaped something like a bass viol. . . . Four readers are involved in an argument over the origin of the saying "O.K." They ask for a decision. Very simple. "O.K." comes from the Choctaw Indian word "Oke," meaning "I agree."

Preferred cosmetics to scapel

The shape of the nose is a major factor in feminine facial beauty. A nose alteration has transformed many plain women into glamorous beauties. However, the operation is dangerous. So much so that Sir Archibald McIndoe, considered the world's greatest plastic surgeon, has repeatedly refused to operate on his daughter's nose. Even when she asked him to give her a nose alteration as a wedding present he declined. Instead he gave her a make-up box.

Green hat means a tender heart

A color psychologist says women who have a liking for the shade of green usually make excellent wives. That they are easy to get along with, understanding and very tolerant. This brings to mind Katherine Cornell's first stage hit, namely, "The Girl In The Green Hat". The heroine of that play always wore a green hat when in the mood for love. The publicity given to this made young women who had a fondness for green hats very self-conscious when wearing them. They also came in for a bit of ribbing. So the popularity for green hats faded away and has never been revived.

Statistics prove . . .

Of all amateur sport participants, fishermen buy the most equipment. . . . Safety experts say the records reveal that automobile driving is four times as dangerous at night as in the daytime. . . . I you have something to memorize the best time to do it is just before going to bed.

Townspeople and students gather during height of the Autherine Lucy incident in Tuscaloosa

OUR COMPLETE SHORT STORY —

shaggy dog

By HANK McCALL

HERMAN'S career as a theatrical agent flashed just long enough to burn all his money. He was flat broke. Not only was his wallet folding air, but his spirit slept in the gutter. He had to get an act, a good act, or forsake his wonderful free life for a job.

He lit a cigarette and wandered through the dusk. His aimless course led him into an alley dividing a row of run-down apartments.

Suddenly he heard a piano playing, distant and faint, but very distinct. The notes had a fleeting quality that bewitched him.

Even in Carnegie Hall, no cadenzas flourished like these cadenzas. They were great! They were beautiful! Never had he listened to playing like this playing.

The only light visible was shining from an open window three stories above the alley. As he paced beneath it, trying to find some means of access, a mighty crescendo flapped the curtains into the night.

The drapes sagged back into place with the last notes. Herman applauded. He leaned against the wall to wait for the next piece. Something brushed his face.

It was the end of the pull rope attached to the lowest section of the fire escape. The iron structure led up to the window. One pull of the rope dragged the ground piece down. Herman scuttled up the steps.

His clattering failed to drown the strains of the Warsaw Concerto. He slowed his steps in reverence.

Herman found the window, peered in, saw the back of a young man stooped over a piano. The agent waited until he finished the score before rapping.

The artist came over calmly and asked, "Yes?"

"Look, Mister, I'm a music lover. That last number was great! How about letting me in?"

"Sure. What would you like next?"

"Anything. Just play."

The pianist sat behind his instrument and tip-toed into Rachmaninoff's Second Concerto. Herman was amazed. Truly, the man was a genius. No one in the world could play with such feeling! His arms and shoulders moved easily yet forcefully.

The music ceased with the first movement. Herman bounded to the piano.

"That was wonderful! Superb! Man, you ought to play for the public."

"Oh, no. I'm not that good. This is just a pastime."

"What do you do for a living?"

"I'm a bookkeeper in a furniture store. I like it."

"Look, I'm a theatrical agent, I know what I'm talking about. You're a find! I'll give you one hundred dollars a week if you will sign my contract."

"No, I couldn't do that. This is just my hobby. Besides, I like

what I'm doing now."

"Look, I'll give you one hundred and fifty dollars a week to start. You'll be famous! Hollywood will beg for you! Think of it. Wealth, fame, glamor! Everything you want!"

"No, I really don't want to get serious about music. It's only for my own amusement. Would you like to hear something else?"

"Sure. Go ahead."

Beethoven's Moonlight Sonata drifted through the room. Herman sat enthralled. Never had its beauty been so distilled, so pure. It was the greatest performance ever given in the history of man. And it was free, wasted.

The young man concluded his playing, came over to sit beside the agent. Herman smiled his most winning smile and tossed in his arguments.

"Look, friend, I'll give you two hundred a week, starting tonight."

"No. I can't do it. I'm not interested. This is just a hobby. How many times must I tell you?"

"Well, I just thought I could change your mind."

"You can't. Besides I've got something better than my piano playing. Right here in this apartment, too."

"Yeah? What?"

"A dog that can play the piano better than I can and a parrot that can sing better than the greatest contralto in the Metropolitan Opera."

"G'wan. Quit pulling my leg. I was trying to be friendly. Don't get wise."

"I'm not kidding. Honest, they're here. The parrot can sing soprano, too. Either voice is better than any woman I've ever heard!"

"Let's see 'em."

The young man disappeared into another room and after a few minutes, returned. He had a macaw in a cage and an airedale on a leash. The bird was ornery and the dog hostile.

"What do you want to hear?"

"Anything, but make it quick."

The pianist turned the stool up and fixed a special chair on its seat. He strapped the airedale in place, moved him up to the keyboard and reached for the bird. She was placed on the top-most end of the sounding board. That done, he clapped twice.

The dog keyed the ominous chords of Wagner's Lohengrin. Then quickly prepared for Elsa's solo. His piano became alive, frenzied; whole portions of the orchestra were carried as if the players were actually present. No man could hope to equal his technique!

The bird came in on the heroine's cue. She was beautiful. Never had a human voice carried such tone, such depth. Her control was uncanny. Herman sat in a drugged stupor until the last note.

"What can I say? It was marvellous, miraculous! Where did you ever find them?"

"Oh, that's another hobby. I just trained them."

"Look, friend, don't turn me down now. That is the greatest act on this green earth. I'll give you one thousand dollars a week."

"Not interested. I'm perfectly content on thirty-five. No, it would spoil everything, I can't do it."

"Wait a minute."

Herman turned his back, pulled out an envelope and pencil, scratched some rapid calculations. He spun around, pointed his finger at the host, and said, "I'll give you two thousand a week, starting right now, for that act. I can't go any higher until we see how the public takes it, but if they like it there's no limit!"

"No. I can't do it, I tell you. My life would be ruined. Besides it's all a fraud."

"Fraud? How can it be a fraud? I saw it with my own eyes."

"Well, I'm sorry, we can't sign. It's all one big fake."

"Look, friend, tell me. How is it a fake?"

The young man shrugged, "The dog's a ventriloquist."

SAP'S RUNNING—The best maple syrup comes with clean up-to-date equipment, frequent collection of the sap to prevent fermentation, and rapid boiling-down. Here is the first operation—boring the hole in the tree trunk to a depth of about 1½ inches. The sap-spout or spile is driven into the hole and the bucket is hung on the spout. The bucket lid is an aid to cleanliness. Sap run depends on the weather; frosty nights and sunny days are excellent. Weather naturally influences the total value of the crop which in a good year will be as high as \$12 million. The average is \$8 million.

Prices for high grade forage crop seed higher this year

REGINA.—The 1956 spring forage crop program sponsored by the plant industry branch of the provincial department of agriculture has been announced.

The program, which was started in 1947 to encourage farmers to improve pastures, build feed reserves and protect soils, will again offer high grade seed to interested parties at cost. Charges for bagging, handling and shipping are borne by the department. Prices this year will be slightly higher than in 1955.

Twenty-six thousand orders for about four and a half million pounds of grass seed have been filled by the branch, since the program's inception, from which 450,000 acres in the province have been seeded to forage crops. The best year was experienced in 1955 when 5,400 orders for 800,000 pounds of seed went out to Saskatchewan farmers and stockmen. In that record year alone, enough seed to sow 94,000 acres was sent out.

Indications are that farmers will sow a substantially greater acreage to grasses in 1956 than in the previous year, the minister said, because of an increasing awareness of the value of the program's many aspects. More farmers now realize what grass can do for their farms, and this factor coupled with the difficult wheat situation and a hard, fodder-short winter point toward an even greater year for the program in 1956.

Adequate supplies of both Grimm and Ladak alfalfa will be available this spring along with brome, crested wheat grass, tall wheat grass and sweet clover, and mixtures. In past years Ladak alfalfa has been in short supply.

Price lists covering all seeds and mixtures available may be obtained from agricultural representative and municipal offices as well as from wheat pool field servicemen and at creameries in the province.

"Past experience has shown that a stable livestock industry is dependent primarily on adequate fodder reserves," said Mr. Nollet, "and the forage crop program allows farmers and ranchers a means to establish such reserves."

CLASSIFIED

NURSES WANTED

"REGISTERED NURSES OR GRADUATE NURSES eligible for registration wanted for medical, surgical, obstetrical wards and operating room scrub nurses, and Nurses Aides with some experience. New wing opening in the near future. For detailed information, write: Superintendent of Nurses, Union Hospital, Moose Jaw, Saskatchewan."

Funny and Otherwise

"See that big fellow over there?" said Jones to his friend at the bar. "He was a famous shark fisherman. His specialty was sticking his right arm into the shark's mouth to remove the hook. The oldtimers used to call him 'Fearless!'"

"Used to? What do they call him now?"

"Lefty!"

It was one of those association-of-ideas Army tests where the examining officer makes a common-place gesture and asks the recruit to fire back at him the first thought it provoked. On this occasion he waved a handkerchief.

First two men gave the formal reply: "Waving goodbye, sir." But the third offered the startling retort: "Women, sir."

"Women?" echoed the officer. "What is there about waving a handkerchief that could possibly make you think of women?"

Replied the recruit blandly: "I'm always thinking of women, sir."

He: "Tell me those three words I love to hear."

She: "O million dollars."

"Mama, may I go out and play?"

"What? With those holes in your socks?"

"No, with the kids across the street."

The little man was applying to the court for a separation on the ground of cruelty.

"Can you give the court an illustration of the alleged cruelty?" asked the judge.

"Well, the other night I dreamt I won \$150,000 in a football pool, and the following morning my wife nearly killed me for not rushing out of the house and putting it into the bank before I woke up."

The human body loses enough heat in an hour to raise the temperature of a half-gallon of water to its boiling point.

Action!

Mrs. J. Q. Kendrick of Stillwater, Okla., became cold while sitting in the family car waiting for her husband. She decided to start the car and turn on the heater. The auto jumped the curb, bowled over a parking meter, crashed through a plate glass window and sent furniture spinning as it rolled across a showroom. Her husband was knocked down by a flying chair.

BE A COURTEOUS DRIVER!

ICED HOT CROSS BUNS

They're "topping" made with new Active Dry Yeast

• They rise so wonderfully—taste so wonderfully good! That's because Fleischmann's new Active Dry Yeast keeps full-strength and active till the very moment you bake! No more spoiled yeast! No more refrigeration—you can keep a whole month's supply of Fleischmann's Active Dry Yeast in your cupboard!

ICED HOT CROSS BUNS

Scald 1½ c. milk, ½ c. granulated sugar, 2 tps. salt and 5 tbs. shortening; stir in 1 c. crisp breakfast-bran cereal and cool to lukewarm. Meanwhile, measure into a large bowl ½ c. lukewarm water, 2 tps. granulated sugar; stir until sugar is dissolved. Sprinkle with 2 envelopes Fleischmann's Active Dry Yeast. Let stand 10 minutes THEN stir well. Add cooled milk mixture and stir in 2 well-beaten eggs. Sift together twice 4 c. once-sifted bread flour, 3 tps. ground cinnamon, 1 tsp. grated nutmeg. Stir about half of this mixture into yeast mixture; beat until smooth. Mix in 1 c. seedless raisins and ¼ c. chopped candied peels. Work in remaining flour mixture. Grease top of dough. Cover and set in warm place, free from draught. Let rise until doubled in bulk. Turn out on lightly-floured board and knead until smooth and elastic. Divide into 12 equal portions; cut each portion into 12 equal-size pieces; knead each piece into a smooth round bun. Place, well apart, on greased cookie sheets and cross each bun with narrow strips of pastry, if desired. Grease tops. Cover and let rise until doubled in bulk. Bake in a hot oven, 425°, 18-20 mins. Glaze hot buns by brushing them lightly with corn syrup. Other treatments: Use confectioners' icing for crosses, on baked buns . . . or spread cooled buns with white icing and make crosses with chopped nuts.

Level Land

Mr. and Mrs. Lawrence Triebwasser moved last week in one of Mabel Lang's houses, and spent the weekend in Youngstown.

Mr. and Mrs. Bill Gow of Calgary were visiting at the homes of Mr. and Mrs. Theo Bechthold, Mr. and Mrs. Ben Huether and Mr. and Mrs. Dan Gramms.

FARM ELECTRIC FORUM AT BANFF SCHOOL OF FINE ARTS APRIL 9-10-11

During the first part of this week an Electrical Farming Forum was held at the Banff School of Fine Arts in Banff. In attendance at the forum were all the District Agriculturists, their Assistants, a number of Agricultural Engineers and other Executive members of the Department of Agriculture.

The purpose of the forum was to discuss the application of electrical service to farm operations and how the farmers could use this service to best advantage.

The primary objective of the course was:—how can the power companies, the suppliers of equipment and District Agriculturists be of most service to the over 35,000 farmers who have had their farms electrified during the past few years.

The DA's raised questions which they had been asked by farmers—questions which indicate the problems the farmers have. These were discussed under the chairmanship of several guest speakers.

Speakers at the forum included Professor Lawson Shanks, retired professor of Agricultural Engineering at the University of Manitoba; J. G. MacGregor, Chairman of the Alberta Power Commission; S. A. B. Kembry, Chief Electrical Inspector of Alberta; F. H. Newcombe and S. S. Graham, Director and Assistant Director of Agriculture Extension Services for Alberta; A. J. Charnetski, Supervisor of the Livestock Branch, Provincial Department of Agriculture, and many representatives of the power companies and major electrical manufacturers of the province.

The meeting was sponsored by the electric utilities of the province, Canadian Utilities Limited, Northland Utilities Limited and Calgary Power Ltd., with the co-operation of the Provincial Department of Agriculture and the electrical manufacturers.

Subjects discussed and demonstrated included new regulations under the revolving Fund Act for farm electrification, basic electrical theory, the Electrical Protection Act, the new Farm "Electrall" tractor generator, heat lamps and their application to livestock and poultry raising, sprinkler irrigation, motors and controls, remote control wiring, water pressure sys-

tems, underground cables, grain grinders and cleaners. S. W. Pettem local District Agriculturist attended the conference.

This forum revealed the almost day-to-day new innovations which will help the farmer to operate his farm more economically. These will be brought to the attention of the farmers through the Department of Agriculture.

RAW VEGETABLE SNACK

Children usually like to sample a scrap of any vegetable being prepared for the table. These raw vegetables are good for anyone, since they contain vitamins and minerals that may be lessened by the cooking process if they are boiled too long or in too much water. Turnip, cabbage, carrot or other raw vegetables are tasty and nourishing.

DON'T UNDERESTIMATE MEASLES

Measles, a contagious disease that usually strikes children but

can be contracted by adults, may have serious after effects. During the course of the disease, there is danger of pneumonia and ear complications. Symptoms, which generally appear about ten days after exposure, usually take the form of runny nose and eyes, sneezing and a dry cough. The temperature may be high and a rash appears inside the mouth, then spreads over the head and body. Any suspicion of measles should have immediate medical attention.
